

The Verde Watershed Research and Education Program at Northern Arizona University is pleased to announce a 2-day field school on **May 18-19, 2002**.

Our intention is to provide a relatively small group of primary & secondary school educators a high-quality, low-cost field school that provides watershed, water supply and water use information you can use and apply in your classroom and curricula.

In the fall of 2001, we sent a survey about a possible field school to many watershed educators, and this program has been developed in response to the many positive and enthusiastic responses that we received.

Implementation

Please share with us how you will implement and apply knowledge and tools gained from this Field School:

The key players in the field school will consist of 20-25 educators from throughout the watershed. The two days will be broken up into four sections.

You will have the opportunity to learn from several specialists each day to cover interesting topics:

- Geology
- Hydrogeology
- Riparian ecology (emphasizing botany)
- Water biology
- Water quality
- Water conservation

Woven into your day will be discussions of policy and community issues. We'll visit key elements of water and wastewater systems, and identify and discuss some of the pressing issues within the watershed that young people will come face-to-face with in their near future.

Our intention is to cover these topics by focusing on a sub-watershed of the Verde, such as Oak Creek, in order to minimize travel time. We fully anticipate that educators will share their experience and teaching philosophy during the Field School.

Please join us for an exciting time of learning about Watershed Issues!
